

GOOGONG SKATE PARK

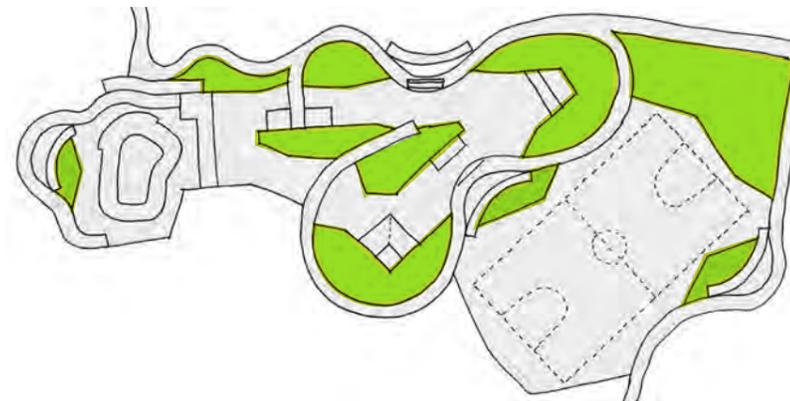

04

DESIGN DEVELOPMENT

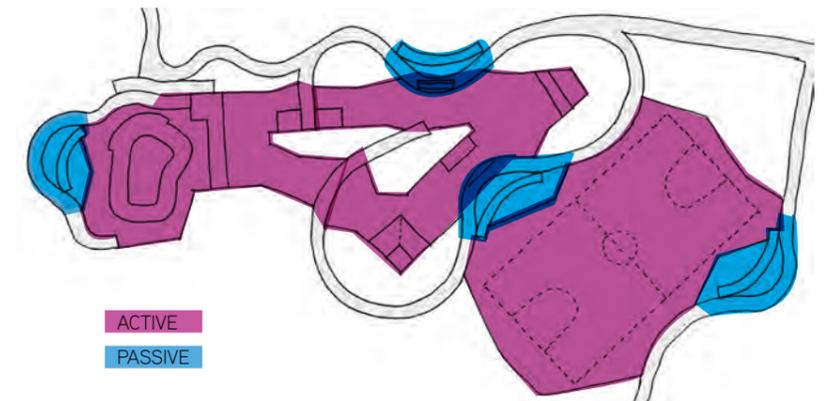

1. PINK-TAILED WORM LIZARD PATH

The organic forms of the pink-tailed worm lizard have been used as a driver to set out and rationalise different uses with the space. The pedestrian pathway network snakes its way around and through skate park separating zones and integrating pedestrians. Vibrant coloured highlights along the journey tie together the whole design.

2. GREEN BREAKOUTS

Green buffers of vegetation are to divide the hard scape concrete expanse. Dividing refuge and active areas these buffers also segregate skate skill discipline.

3. INTEGRATED FACILITY

The design is to integrate skate skill, style and other recreation into an overall family friendly precinct. A central shelter area is to directly connect the skate and court areas.

PALETTE - SKATE AND MATERIAL

MATERIALS + FINISHES

Natural materials will be used throughout to integrate the facility into its setting. Natural tones and textural finishes will further enhance its natural sense of place in Googong.

1. Decomposed Granite
2. Earthy concrete tones
3. Artificial turf
4. Vibrant coloured highlights
5. Unique to place skate able features
